Scales

Now that you can comp through the form from memory, let's look at minor blues scales.

Three scales that I recommend you start with are:

- 1. Blues Scale
- 2. Harmonic Minor Scale
- 3. Dorian Scale

There are **two two-octave scales** to learn for each of these scales.

You should ideally learn these across the entire fingerboard, but starting with two positions is fine for now.

The minor blues is a good application for practising minor scales.

So, you can always use it to practise other minor scales that you know or might learn in the future.

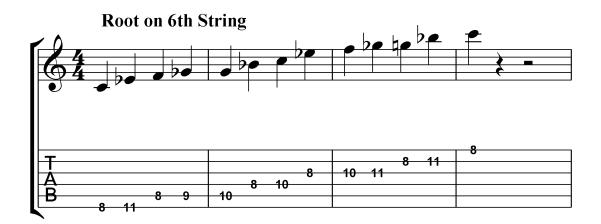

The three solos in the later section all use parts of these scales.

So, make sure you can complete the checklist before moving on!

ASSIGNMENTS:

- > Play the scales ascending and descending with no stops.
- > Play the scales at 140bpm with two notes per beat.
- > Play the scales with straight and swung eighth notes.
- > Play all the scales continuously.

Blues Scale

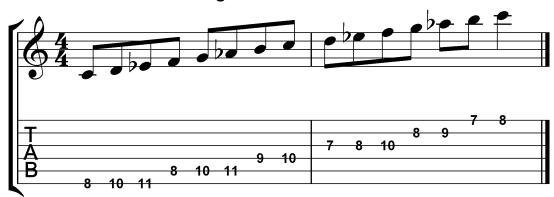

When can you use the blues scale?

- > To improvise over the entire 12 bar form.
- > To play a minor blues theme.
- > Over each tonic minor chord e.g. Cm7 and Fm7.
- > Over the turnaround; check out the last four bars of John Coltrane's Mr PC for an example of this.

Harmonic Minor Scale

Root on 6th String

Root on 5th String

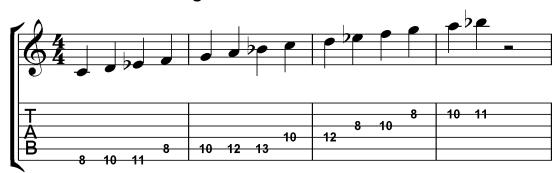

When can you use the Harmonic Minor Scale?

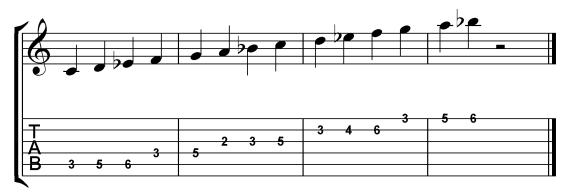

- ➤ The scale works especially well in bars 9 and 11 to address the long minor ii-V-I.
- ➤ You can also use fragments of it or just play it from the fifth degree in bars 2 and 12 to outline the short ii-V's.

Dorian Scale

Root on 6th String

Root on 5th String

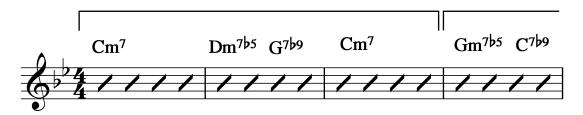

When can you use the dorian scale?

- To improvise over chords I and IV. This will provide you with a basis for jazzy sounding lines to contrast the blues scale.
- > Even if you are playing a standard minor jazz blues you can use the tonic scale for the entire first four bars.
